What is the problem with sharing responsibility?

Blythe McLennan, John Handmer
Centre for Risk and Community Safety, RMIT University, Victoria

"There is a need for a new focus on shared responsibility." - National Strategy for Disaster Resilience (2011), p. 3.

"As it is used today, 'responsibility' is an interestingly ambiguous or multi-layered term." 1

"...responsibility for community safety during bushfires is shared...each of these groups must accept increased responsibility." - Victorian 2009 Bushfires Royal Commission, p. 352

"What exactly is responsibility?...The answer to these questions is: It all depends on the perspective and on the goals pursued." 2

"How we define and frame problems will circumscribe our search for solutions." 3

Framing 'wicked' problems
Frames are the "underlying structures of belief, perception, and appreciation" that shape how we 'see' problems. However, "a way of seeing is also a way of not seeing."5

'Wicked' problems are problems that do not have easy, straightforward, win-win solutions.6 Framing wicked problems too narrowly can restrict what solutions we envisage, and it may lead to disputes over goals.

Reflecting on the different ways we frame the 'wicked' problem of sharing responsibility for emergency management can help us to see alternative solutions. It may even help us to move past some intractable disputes.

Stage 1 of the Sharing Responsibility project identified 11 key ways that the problem of sharing responsibility between government and non-government sectors is framed in risk research (see Fig 1). Importantly, each frame emphasizes some facets of responsibility more than others. The next stages of the project explore alternative solutions.

The Sharing Responsibility project
